

## GDP growth generated by the cultural and creative industries compared to other sectors from 2011–2014 (in bn euros)

Aid to interpretation: Gross value added in the cultural and creative industries amounted to €64 billion in 2014. This is less than the comparative figures for mechanical engineering or the automotive sector, but more than for those for the chemical industry and the energy industry.

Additional information: The term 'cultural and creative industries' is used to refer to the activities defined by the following two-digit codes from the 2008 Classification of Economic Activities: 58, 59–60, 73, 90–92. Deviations from figures published in the preceding year are due to corrections in the national accounts.
